

LorisMenghi Core

Installation & User Guide

1. Introduction

LorisMenghi Core is a lightweight extension for Magento that provides a dedicated top level admin menu entry ("lorismenghi.com") and a shared dashboard page used as the central access point for other LorisMenghi extensions for Magento 2 (COD confirmation via WhatsApp, abandoned cart recovery, shipping tracking notifications).

This module does not implement any business logic by itself and does not affect the storefront or checkout.

2. Requirements

- PHP 8.1 or higher
- Magento Open Source or Adobe Commerce 2.4.x
- Access to the Magento file system and CLI

3. Installation (Composer)

3.1. Backup

Before installing any new extension, it is recommended to back up your Magento database and codebase.

3.2. Install the module via Composer

1. Require the package:

```
composer require lorismenghi/module-core
```

2. Enable the module:

```
bin/magento module:enable LorisMenghi_Core
```

3. Run the upgrade scripts:

```
bin/magento setup:upgrade
```

4. Clear the caches:

```
bin/magento cache:flush
```

3.3. Production mode (recommended)

If your store is running in production mode:

```
bin/magento setup:di:compile
```

```
bin/magento setup:static-content:deploy -f
```

4. Installation (manual code upload)

1. Copy the module code into:

```
app/code/LorisMenghi/Core
```

2. Enable the module:

```
bin/magento module:enable LorisMenghi_Core
```

3. Run upgrade scripts:

```
bin/magento setup:upgrade
```

4. Clear caches:

```
bin/magento cache:flush
```

5. If in production mode, run:

```
bin/magento setup:di:compile
```

```
bin/magento setup:static-content:deploy -f
```

5. Usage

After installation, log in to the Magento Admin panel.

You will see a new topnlevel admin menu item labeled "lorismenghi.com".

The dashboard can display:

- Links to documentation for installed LorisMenghi extensions for Magento 2
- Links to support and contact pages
- Links or status blocks for current and future modules

The core extension requires no configuration and acts solely as a shared entry point for other LorisMenghi extensions for Magento 2.

6. Uninstallation

6.1. Disable the module

bin/magento module:disable LorisMenghi_Core

6.2. Remove Composer package

composer remove lorismenghi/module-core

6.3. Run upgrade and clear caches

bin/magento setup:upgrade

bin/magento cache:flush

If in production mode, you may also need:

bin/magento setup:di:compile

bin/magento setup:static-content:deploy -f

7. Support

For technical or commercial support relating to LorisMenghi Core or other LorisMenghi extensions for Magento 2:

- Website: <https://www.lorismenghi.com>
